

Web and Internet

Class VI lab 10

Email

Electronic mail is a method of exchanging messages between people using electronic devices

Traditional Mail vs Email

For example, it will usually look something like this:

Elena M. Casarosa 202 Cedar Lane Raleigh, NC 27601

Address

Email addresses are always written in a standard format, but they look quite different from traditional mail.

An email address includes a username, the @ (at) symbol, and the email provider's domain.
Usernames often include numbers and shortened versions of a name to create a unique email address, and will usually look something like this:

emcasarosa82@gmail.com

Delivery

Traditional mail in a sealed envelope or package is delivered to a home or post office box by a mail carrier.

Email is delivered electronically across the Internet. It is received by the inbox of an email service provider like Gmail, Yahoo, or Outlook.

Traditional mail delivery could take anywhere between a couple of days, to a couple of weeks, depending on where it's being sent.

Email is delivered instantly, or usually within a few minutes.

Webmail

Webmail is any email client implemented as a web application running on a web server

Email Features

- Instant messaging
- online address book
- online calendar
- public profile
