

Class Viii

Python Flow Control

Lab 19

Supported by

Flowchart

a graphical representation of a computer program in relation to its sequence of functions

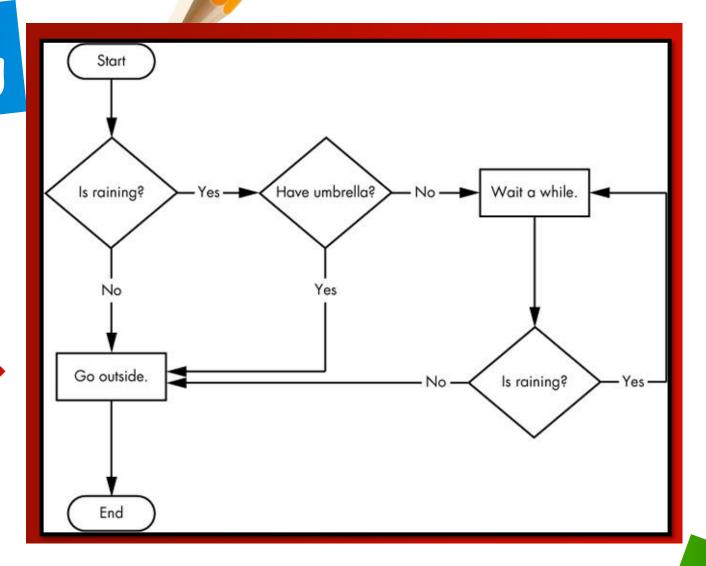

Flowchart Drawing

You have to start from a point and go through some of the conditions and target is to go to the end

Boolean Values

The Boolean data types has only two values. True & False

>>> spam = True

>>>spam

True

>>>

>>>2==2

True

>>>

Comparison Operator

compare two values and evaluate down to a single Boolean value

Operator Meaning

Equal to ==

Not equal to !=

Less than <

Greater than >

Less than or equal to <=

Greater than or equal to >=

Blocks of Code

- ✓ Blocks begin when the indentation increases.
- ✓ Blocks can contain other blocks.
- ✓ Blocks end when the indentation decreases to zero or to a containing block's indentation.

If Statement

compare two values and evaluate down to a single Boolean value

elif Statement

The elif statement is an "else if" statement that always follows an if or another elif statement. It provides another condition that is checked only if all of the previous conditions were False.

Thank You!

You'll learn logic implement from next lab
